

Guidewire DEVTrails 2026 | Phase 3 Final Pitch

TrustShield AI

Advanced parametric income protection for gig delivery workers

TrustShield AI

AI-powered weekly parametric income protection for gig delivery workers

- Coverage scope: loss of income only due to weather, pollution, and curfew disruptions.
- Excludes health, life, accident, and vehicle repair by design.
- Built for adversarial environments with explainable AI and fraud controls.

Problem and Persona

Delivery workers lose income during uncontrollable disruptions

- Target persona: platform-based food, grocery and e-commerce delivery workers.
- Workers lose 20-30% weekly income during weather and curfew disruptions.
- Existing safety nets are weak, manual and vulnerable to delayed or false claims.

Our Solution

Weekly micro-insurance with AI decisioning and automated routing

- Role-based experiences for Worker, Insurer/Provider, Platform Ops and Admin.
- Provider-linked data isolation ensures portfolio boundaries and governance.
- Real-time disruption evidence drives claim simulation and approvals.

How It Works

Signup to payout in one trust pipeline

- Worker registers, selects provider, verifies email, and activates coverage.
- Weekly policy purchase and telemetry-backed claim trigger submission.
- AI + fraud + anomaly + graph signals produce APPROVED / NEEDS_REVIEW / REJECTED.

AI + Fraud Architecture

Explainable risk scoring for trustworthy decisions

- Composite risk = location + device + behavior + network + cluster risk.
- Fraud stack uses GPS inconsistency, weather mismatch, repeat claims, linked accounts.
- Graph intelligence detects synchronized claim pressure and ring-like fraud patterns.

Phase 3: Advanced Fraud Detection

Delivery-focused practical fraud defenses

- GPS spoof pressure: speed jumps, confidence mismatch and route anomalies.
- Weather claim checks: cross-validation with live disruption and AQI signals.
- Mass pattern detection: synchronized claims trigger elevated review pressure.

Phase 3: Instant Payout Simulation

Gateway-grade trace and SLA visibility

- Approved claims carry payout status, gateway, transaction ID, timestamp and processing seconds.
- Gateway modes: RAZORPAY_TEST, STRIPE_SANDBOX, UPI simulator fallback.
- UI highlights under-30-second payout SLA for judge-visible impact.

Intelligent Dashboards

Trust and control for workers, insurers, and ops

- Worker dashboard: protected earnings, claims history, payout trace, coverage signals.
- Insurer dashboard: loss ratio, disruption risk band, fraud pressure, payout SLA.
- Ops/Admin dashboards: queue controls, governance, and review workflows.

Pricing & Sustainability

Weekly pricing built for gig cash flow

- Premiums calculated weekly with dynamic risk modifiers and provider controls.
- Loss ratio tracking improves underwriting and reserve posture decisions.
- Provider liquidity and payout ledger keep sustainability visible.

Business Viability

B2B2C-ready model with monetization levers

- Providers publish policy products and underwrite linked worker cohorts.
- Platform earns distribution and risk-management value through trust automation.
- Data isolation and governance controls improve enterprise adoption confidence.

Scale & Defensibility

Built for cities, providers and disruption patterns

- Queue-based processing for ingestion, model jobs, replay and retries.
- Feature snapshots and model artifacts support continuous learning loops.
- Modular API design supports future real gateway and integration readiness.

Why TrustShield AI Wins

Phase 3 delivers clear value for judges

- Strong phase coverage: ideation, automation and scale optimization complete.
- Clear demo story: disruption trigger !' AI decision !' instant payout simulation.
- Balanced worker trust, insurer control, and platform resilience in one stack.
