

Phase 3 Final Pitch

A secure, explainable, and fraud-aware parametric protection system designed for delivery workers in adversarial environments.

Why it matters

- Protects weekly income for delivery workers during weather, pollution, and curfew disruptions.
- Excludes health, life, accident, and vehicle repair to keep coverage focused and sustainable.
- Built to operate in adversarial conditions with robust fraud controls.

Guidewire DEVTrails 2026

Problem and Persona

Real income loss for platform-based delivery workers

- Delivery workers lose 20-30% income during uncontrollable external disruptions.
- Target persona: food, grocery, and e-commerce delivery workers.
- Workers need a weekly protection model aligned with their earnings cycles.
- Current safety nets are weak, manual, and vulnerable to false or delayed claims.

Guidewire DEVTrails 2026

Our Solution

AI-first weekly micro-insurance with operational trust

- Weekly policy model with real-time claim triggers and automated decisioning.
- Role-based surfaces for Worker, Insurer/Provider, Platform Ops, and Admin.
- Provider-linked data isolation secures insurer portfolios and governance boundaries.
- Disruption evidence is validated using telematics, weather, AQI, and fraud signals.

Guidewire DEVTrails 2026

How It Works

Seamless flow from signup to payout

- Worker signs up, selects a provider, verifies identity/email, and activates coverage.
- Worker purchases a weekly policy and submits a telemetry-backed claim trigger.
- AI + fraud + anomaly + graph signals produce APPROVED, NEEDS_REVIEW, or REJECTED decisions.

Guidewire DEVTrails 2026

AI + Fraud Architecture

Explainable scoring for trust and transparency

- Composite risk score = location + device + behavior + network + cluster risk.
- Fraud score stack includes GPS inconsistency, weather mismatch, repeat claims, and linked accounts.
- Graph intelligence identifies synchronized claim pressure and ring-like behavior.

Guidewire DEVTrails 2026

Phase 3: Advanced Fraud Detection

Delivery-focused practical fraud defenses

- GPS spoof pressure: unrealistic speed jumps, confidence mismatch, and route anomalies.
- Fake weather claim checks: cross-validated disruption signals with real-time data.
- Mass pattern detection: synchronized claims and ring-like account behavior trigger review pressure.

Guidewire DEVTrails 2026

Phase 3: Instant Payout Simulation

Gateway-grade trace and SLA visibility

- Approved claims include payout status, gateway, transaction ID, timestamp, and processing seconds.
- Gateway modes supported: RAZORPAY_TEST, STRIPE_SANDBOX, and UPI simulator fallback.
- UI highlights under-30-second payout SLA for judge-visible impact.

Guidewire DEVTrails 2026

Intelligent Dashboards

Trust and control for workers, insurers, and ops

- Worker dashboard: protected earnings, claims history, payout trace, and coverage signals.
- Insurer dashboard: loss ratio, disruption risk band, fraud pressure, and payout SLA.
- Ops/Admin dashboards provide queue controls, governance actions, and review workflows.

Guidewire DEVTrails 2026

Pricing & Sustainability

Weekly pricing built for gig cash flow

- Premiums are calculated weekly with dynamic risk modifiers and provider controls.
- Loss ratio tracking improves underwriting and reserve posture decisions.
- Provider liquidity and payout ledger keep sustainability visible.

Guidewire DEVTrails 2026

Business Viability

B2B2C-ready model with enterprise confidence

- Providers publish policy products and underwrite linked worker cohorts.
- Platform earns distribution and risk-management value through trust automation.
- Data isolation and governance controls improve enterprise adoption confidence.

Guidewire DEVTrails 2026

Scale & Defensibility

Built for cities, providers, and disruption patterns

- Queue-based processing for ingestion, model jobs, replay, and retries.
- Feature snapshots and model artifacts support continuous learning loops.
- Modular API design supports future real gateway and platform integrations.

Guidewire DEVTrails 2026

Why TrustShield AI Wins

Clear phase 3 value for the judge panel

- Strong phase coverage from ideation to automation and scale optimization.
- Clear demo story: disruption trigger !' AI decision !' instant payout simulation.
- Balanced approach across worker trust, insurer control, and platform resilience.
